

# New Clinical Trial in HAE

## PREVENTING ATTACKS

A Research Study in patients with HAE will begin soon, testing whether an oral investigational medicine can reduce the frequency of HAE attacks over a 12 week period.

If you are interested in participating, please contact:

This study may be for you if you:

- Have been diagnosed with HAE Type 1 or 2 and have had HAE attacks currently or in the past
- Are  $\geq 18$  years of age
- Are willing to fill out a daily diary about taking your study medicine and about any HAE attacks that occur
- Can commit to be in the study for up to 6 months and come to the research clinic 6 times over that period
